Work Experience

AI Product Engineer – Sage Grey Technologies

Dec 2025 – Present

Engineering team Lagos, Nigeria | Remote

- Designed and maintained a Retrieval-Augmented Generation (RAG) system powering automated client call handling for NKIRU, combining vector-based knowledge retrieval with large language model (LLM) inference to deliver context-aware, natural language responses, reducing workload on support agents by 30%.
- Architected an AI-first conversational chatbot for LottoNowNow, using natural language processing (NLP) and LLM-driven dialogue to automate FAQ handling and customer support workflows, reducing manual support load.
- Integrated the Anthropic Claude SDK to build a document processing and ingestion pipeline, applying prompt engineering and structured data extraction to parse and organise large-scale organisational knowledge bases for retrieval.
- Developed an in-browser rich-text document editing experience using Tiptap, supporting structured content creation, formatting, and management within AI-assisted workflows.
- Pioneered the integration of AI-driven workflows (RAG, LLM-based automation) into existing application systems and architecture.

Senior Frontend Engineer – Serve Consulting

Nov 2024 – Dec 2025

Frontend team Lagos, Nigeria | Remote

- Led frontend engineering for a multi-tenant SaaS/ERP platform serving major Nigerian enterprise clients across oil and gas, FMCG, and logistics including 11 PLC, Ardova PLC, and Nigerian Breweries.
- Architected and developed complex React and TypeScript applications supporting order processing, logistics, fleet management, and delivery operations.
- Led development of React Native mobile applications for real-time order tracking.
- Integrated Google Maps APIs (geolocation, geocoding, routing) for route planning, vehicle tracking, delivery scheduling, and location-based workflows.
- Designed and implemented role-based access control and multi-tenant authentication using Firebase, supporting secure access across multiple organisations and user roles.
- Improved application performance by 40%, optimizing data fetching, rendering, and frontend architecture across web and mobile platforms.

Fullstack Engineer – Local Coders

Jan 2022 – Aug 2024

Software team Abuja, Nigeria | Remote

- Led frontend engineering across multiple products, spanning healthcare, scientific Lab management tool, AI, payments, business development, and enterprise administration.
- Architected and delivered interfaces for a birth management system, Lab management tool, AI product description generator, business portals, and administrative dashboards.
- Built AI-powered product features using the Vercel AI SDK, including real-time streaming and large-scale automated product description generation.

- Integrated Stripe payments and REST/GraphQL APIs for registration, multi-step KYC, financial transactions, and other core business workflows.
- Optimized GraphQL queries for a Gatsby.js based laboratory management platform, reducing server response time by 27%.
- Refactored legacy modules using clean architecture principles and led performance and code quality improvements across projects, focused on reusable components, efficient data fetching, and scalable frontend architecture

Frontend Developer – Lanatus Systems

Jun 2021 – Dec 2021

India, Remote

- Designed and implemented React components, transforming static designs into interactive user interfaces.
- Refactored legacy React class components into functional components, improving performance and readability.

Education

- B.Sc. Mathematics, University of Abuja, Nigeria. 2019 – 2023

Technologies and Languages

- Languages: Javascript, Typescript, Python.
- Frontend: JavaScript (ES6+), TypeScript, React.js, Next.js, Gatsby.js, HTML5, CSS3, SCSS.
- Backend: Node.js, NestJS, ORMs, ExpressJS, PostgreSQL, MySQL, Redis, GraphQL, REST APIs.
- AI/ML: LLM integration, RAG (Retrieval-Augmented Generation), Anthropic Claude SDK, Vercel AI SDK, prompt engineering, NLP, conversational AI, vector-based retrieval, document processing pipelines.

Projects

- WAKASUB: Virtual Top up (VTU) and Digital Payments Platform, Next.js, React, ReactNative, TypeScript, Chakra UI, NestJS, Prisma, PostgreSQL, Supabase, Redis, GraphQL, Capacitor.
 - Built and scaled a Nigerian digital services platform for airtime, data, cable TV, electricity, and gift card top-ups, migrating it from a Laravel/React stack to a modern Next.js, PostgreSQL, and Supabase architecture.
 - Developed core transaction, wallet, authentication, payment, and third-party service integration workflows, including Monnify, WhatsApp Business API, and Meta APIs, plus a rewards engine built on the VTU infrastructure.
 - Scaled the platform to 5,000+ registered and verified users, processing ₦10M+ in transaction volume per quarter.
- Dayn Tracker: Personal Debt Tracking Mobile Application, ReactNative, TypeScript, PostgreSQL, Supabase.
- Squarebooks: Personal Productivity and Task Management Mobile Application ReactNative, TypeScript, Tailwind CSS, Supabase, PostgreSQL

Interests

- AI product engineering, entrepreneurship, and productivity systems.
